B.Sc. FIRST SEMESTER DEGREE EXAMINATION JANUARY 2023

Generic English - I

Duration:2 Hours   **Max Marks:60**

SECTION A – WORKBOOK

UNIT I : RECEPTIVE SKILLS AND PRODUCTIVE SKILLS

I.Read the following passage and answer the questions given below: **5×1= 5**

Information is stored in audio/video tapes by magnetising them. These tapes are actually long, thin plastic films coated with a magnetic material, mainly iron oxide. Likewise, the player has a recording head which consists of a coil of a wire wound around a circular piece of iron with a small gap. Any current passing through the wire would produce a magnetic field around it. Information (voice or image or any data) to be stored is converted into electric signals (by a microphone) amplified and fed to the recorder head. As the current varies in accordance with the image or sound (input signals) to be recorded, it produces a varying magnetic field. When the tape is run through the small gap present in the recording head, the varying magnetic field magnetises the particles on the tape rearranged their moments in accordance with the variation in the input signal. To reproduce the Signal recorded, the tape is again run past the recording/playing head which senses the magnetic field along the tape. This induces a varying current in the coil. This current is amplified and fed to the speaker or TV to reproduce the original message.

    a. How is information stored in audio/video tapes?

    b. How does a wire produce magnetic field?

    c. How is the information fed to the recorder?

    d. How does the tape reproduce the recorded signal?

SECTION A – WORKBOOK
UNIT I

I.A.Skim the following paragraph and answer the questions that follow: 1×3= 3

Mount Vesuvius, a volcano located between the ancient Italian cities of Pompeii and Herculaneum, has received much attention because of its frequent and destructive eruptions. Over the years, excavations of Pompeii and Herculaneum have revealed a great deal about the behavior of the volcano. By analyzing data, much as a zoologist dissects a specimen animal, scientist have concluded that the eruption changed large portions of the area's geography. For instance, it turned the Sarno River from its course and raised the level of the beach along the Bay of Naples. Meteorologists studying these events have also concluded that Vesuvius caused a huge tidal wave that affected the world's climate. In addition to making these investigations, archaeologists have been able to study the skeletons of victims by using distilled water to wash away the volcanic ash. By strengthening the brittle bones with acrylic paint, scientists have been able to examine the skeletons and draw conclusions about the diet and habits of the residents. Finally, the excavations at both Pompeii and Herculaneum have yielded many examples of classical art, such as jewellery made of bronze, which is an alloy of copper and tin.

a) Give one example to show how the eruption of Mount Vesuvius changed large
   portions of the area's geography.
b) What technique did archaeologists use to study the skeletons of victims?
c) ____have concluded that the volcanic eruption caused a tidal wave.

On August 7, while the Armada lay at anchor on the French side of the Strait of Dover, England sent eight burning ships into the midst of the Spanish fleet to set it on fire. Blocked on one side, the Spanish ships could only drift away, their crews in panic and disorder. Before the Armada could regroup, the English attacked again on August 8. Although the Spaniards made a valiant effort to fight back, the fleet suffered extensive damage. During the eight hours of battle, the Armada drifted perilously close to the rocky coastline. At the moment when it seemed that the Spanish ships would be driven onto the English shore, the wind shifted, and the Armada drifted out into the North Sea. The Spaniards recognized the superiority of the English fleet and returned home, defeated.

SECTION A - WORKBOOK

UNIT I

I. A. Skim the following paragraph and answer the questions that follow: **3×1= 3**

Can you imagine a college without walls, professors or classrooms? Educator Bunker Roy can. More than 40 years ago, Roy, now 69, founded the Barefoot College in Tilonia, Rajasthan. His school admits rural women, often grandmothers and teaches them the basics of solar engineering and freshwater technology. His efforts have yielded enormous benefits. When the women return to their homes, they are trained enough to provide their communities, some of the world's most lonely places, with electricity and clean water. They also gain something important: a newfound self-confidence. The Barefoot model has already been used to empower women throughout Asia, Africa, and Latin America. The former President of USA, Bill Clinton presented Roy with a Clinton Global Citizen Award, which honours leaders who are solving the world's problems in effective ways.

If you go all over the world, to very remote villages, you will often find only very old people and very young people. The men have already left. So two ideas were put into practice in order to make the Barefoot Model work. First it was declared that men are untrainable, restless, always ready to move, ambitious, and they all want a certificate to show for their efforts. And the moment you give one of them a certificate, he leaves the village looking for a job in the city. That is how the simple, practical solution of training grandmothers came up. They are sympathetic, tolerant, willing to learn, and patient. All the qualities you need are there. And the second idea was not to give out certificates. Because the moment a certificate is given, a woman, like a man, will see it as a passport for leaving rural areas and going to urban areas to find a job.

Barefoot College follows the lifestyle of Mahatma Gandhi: Students eat, sleep, and work on the floor. They can work for 20 years or they can go home the next day. As of today, 604 women solar engineers from 1083 villages in 63 countries have been trained. The engineers have given solar power to 45,000 houses. These were done by women who had never left their homes before. Bunker Roy dreams of providing the world's 47 least developed countries with Barefoot College trained grandmothers and solar electrify more than 1,00,000 houses.

(a) What training does the Barefoot College give the rural women it admits?

(b) How did the former President of USA recognise Bunker Roy?

(c) Why was it decided that the grandmothers would not be awarded certificates?

B. Scan the following paragraph and answer the questions that follow: 2×1= 2

The behaviour used by a nonhuman animal to avoid being harmed by another is animal defense. This might involve defensive aggression against a potential predator or against a member of its own species, from its own group or an outside group, or animal escape behavior to avoid the source of harm. The animal kingdom is full of creatures which possess impressive weapons, used to hunt their seemingly helpless victims. However, there are certain animals out there that are more than capable of looking after themselves. Killer bees -their name alone should be enough to put off any potential predators but if anything does decide to take on a swarm of these killer bees then they have an efficient way of making things regret it! If the swarm suspect a potential threat to themselves or their hive they will begin to attack the unlucky individual. Like all bees, the Africanized bees or killer bees will sting their enemies, releasing toxins into their body in the process. However, this is not the end. The toxins contain a hormone which attracts the other bees and signals exactly where the enemy is. So if you are stung by one of these beasties, be sure to run because their friends won't be far behind!

RECEPTIVE SKILLS AND PRODUCTIVE SKILLS

I. Read the following passage and answer the following questions: **5×1= 5**

Christmas traditions are abundant, from hanging stockings to leaving milk and cookies out for Santa. They're all fairly wholesome, too. But in Victorian England, Christmas was an opportunity to exchange gruesome stories of ghosts, evil spirits, and people gone mad.

According to Sara Cleto, an expert in folklore who spoke with History.com, Victorian-era ghost stories were ideal for an England that was swathed in darkness. At night, with candles or a fire the only light source, the atmosphere was perfect for a spooky story to kill time on a long winter's night.

Part of the incentive to tell ghost stories was a belief that spirits had license for mischief on Christmas Eve—a kind of free play for ghosts before they were said to restrain themselves on the holy day to follow.

When stripped of its seasonal trimmings, the cold winter night can also be ideal for a scary story—people are nominally trapped in place if the weather is poor, no electricity is brightening rooms, and no telephones could bring comfort. That was true of both storytellers and the fictional people populating the story, making for an immersive experience. Not even Santa Claus was spared in this morbid spin on the holiday. In one iteration, Santa teamed up with the devil to figure out which children deserved gifts and which ones needed punishment.

The man who helped popularize the holiday ghost genre was Charles Dickens, who wrote A Christmas Carol in 1843 and printed a number of supernatural holiday stories in publications he was editing. But Dickens was working with more than just spectral entities. His themes of family and forgiveness were baked in, and eventually, those became the dominant lessons inherent in holiday stories.
